Have you heard about credits for carbon removals? Have you wondered how these removals would be reliably measured and certified before the credits can be transformed into money? This is the task for a new kind of certification system for credible carbon removals! Such system should strengthen the climate mitigation chain by empowering crucial stakeholders while deterring greenwashing and preventing fraud. But what is a reliable system? And how exactly does it work? Come and listen to our experts to discover how Earth Observations play a crucial role in carbon markets and protect essential natural co-benefits.

Speakers

Anna Ikonen, Finnish Association for Nature Conservation (Finland);
Sassan Saatchi, NASA/Jet Propulsion Laboratory (USA);
Emmanuel Salmon, ICOS ERIC (Finland)
